# ANJOR RANE

**AI ENGINEER | AGENTIC AI & LLM SYSTEMS | LANGGRAPH, RAG, FASTAPI | GOOGLE CLOUD**

Badlapur, Thane, India | +91 7875621161 | anjorrane112003@gmail.com | LinkedIn | GitHub | Portfolio

## KEY HIGHLIGHTS

- **Live agent:** LangGraph agent with RAG over 12 policy documents, tool calling, memory and guardrails, deployed on Google Cloud (live demo).
- **Shipped computer vision:** SignSure signature verification, 85% detection accuracy and 92% clean-image comparison accuracy; component reused across projects; “Pat on the Back” award.
- **IEEE-published:** phishing URL detection research and a working full-stack app (IEEE paper).
- **Delivery and client-facing:** co-managed Docker/Jenkins CI/CD across 13 projects; demos and monthly feedback loops with founders and clients.
- **Agentic AI training:** IIT Roorkee Agentic AI certification program (provisional scorecard) and 4 monthly “Excellence in Evaluations” recognitions (Jun–Oct 2026).

## SUMMARY

AI engineer with 1+ year of professional experience building and deploying LLM agents, RAG solutions and ML APIs on Google Cloud in a B2B FinTech environment, including a Rasa chatbot with token-secured, access-aware integrations to internal services and an independently built Detectron2 + Siamese-network pipeline (FastAPI).

## TECHNICAL SKILLS

**Agentic AI & LLM:** LangGraph (agent orchestration), RAG, tool calling, MCP, agent memory, guardrails, evaluation test sets, Rasa, NLP
**Backend & Data:** Python, NumPy, Pandas, FastAPI, REST APIs, Spring Boot, Java, microservices, token-based auth, MySQL, MongoDB, ETL / data mapping
**Cloud & Delivery:** Google Cloud (VM deployment), AWS EC2, Cloudflare Tunnel (HTTPS), Docker, Jenkins, CI/CD, Linux, Git, GitHub
**ML & Frontend:** Detectron2, Siamese networks, TensorFlow, XGBoost, Random Forest, Logistic Regression, React, JavaScript

## PROFESSIONAL EXPERIENCE

**Software Development Engineer** | PayVance Innovation Pvt. Ltd., Thane | Dec 2024 – Dec 2025

- Built an AI chatbot using Rasa with 4 intent categories (employee account lookup, customer-document retrieval, loan/date calculations, policy questions); integrated gateway/auth/discovery/loan services and enforced secure, access-aware responses using caller tokens and the internal auth service.
- Independently built SignSure, a FastAPI-served signature-verification pipeline (fine-tuned Detectron2 detection, preprocessing, Siamese comparison); used NumPy for extracted image vectors and Pandas for Excel image metadata. Fine-tuned on ~200 client documents, evaluated on 90 more: detection 85% accuracy, 83% precision, 78% recall; comparison 92% on clean images, ~70% end-to-end on noisy inputs. Reused in other projects; earned a “Pat on the Back” certificate.
- Co-managed Docker/Jenkins delivery across 13 ongoing and several completed projects; replaced manual Windows JAR copying with Linux containerized, multi-environment pipelines (dev, test, demo, selected production) typically deployable in minutes.
- Built the React UI for a visual ETL tool letting non-technical banking users map columns and configure joins; supported recurring transfers of ~800K–1M rows (setup up to 10 minutes; execution ~20–30 minutes on a 32 GB server).
- Worked directly with founders and clients, translating monthly feedback into Agile changes; reviewed peer code, including an intern’s Docker/Jenkins changes.

**Freelance Web Developer** | Independent client projects | 2025 – Present

- Delivered 3 live, responsive portfolio websites end to end, deployed on Vercel, with Google Drive-backed content updates and Google location/reviews and WhatsApp contact integrations.

## AI AGENT & ML PROJECTS

**Naukri AI Recruitment / Support Agent** | LangGraph, RAG, MCP, FastAPI, Google Cloud | Live demo | GitHub

- Built and deployed a live LangGraph agent with status-retrieval and RAG tools, memory, guardrails, required-field checks and fallback/error handling; evaluated with 10-query test sets; deployed FastAPI on a Google Cloud VM with HTTPS via Cloudflare Tunnel routed through an AWS EC2 connector.

**PhishGuard — Phishing URL Detection** | Python, FastAPI, ML, React | GitHub | Live demo | IEEE paper

- Built a full-stack phishing URL classifier with a FastAPI inference API and React interface; compared Random Forest, Logistic Regression and XGBoost.

## EDUCATION & CERTIFICATIONS

**B.Tech, Information Technology** - Ramrao Adik Institute of Technology, DY Patil University | 2021–2025 | GPA: 8.44/10 · Degree certificate

**IIT Roorkee Agentic AI Certification Program:** Provisional scorecard | **IIT Roorkee Campus Immersion (2026):** Certificate

**Excellence in Evaluations - Agentic Systems and Design, iHUB DivyaSampark / Masai:** Jun 2026 · Jul 2026 · Aug 2026 · Oct 2026

**Publication:** “Phishing URL Detection using Machine Learning Algorithms”, IEEE Xplore, Oct 2025. **Pat on the Back - PayVance:** Certificate
