# ANJOR RANE

**AI ENGINEER | AGENTIC AI, RAG, LLM APPLICATIONS & GOOGLE CLOUD**

Badlapur, Thane, India | +91 7875621161 | anjorrane112003@gmail.com | LinkedIn | GitHub

## PROFESSIONAL SUMMARY

AI engineer with 1+ year of professional experience building LLM-powered agents, RAG solutions and ML APIs, and deploying them on Google Cloud, in a B2B FinTech environment. Built and deployed a live LangGraph agent using RAG, tool calling, memory and guardrails, and a Rasa chatbot with token-secured, access-aware integrations to internal services. Independently built a Detectron2 + Siamese-network signature-verification pipeline (computer vision). Experienced working directly with clients: demos to founders/clients and turning monthly client feedback into Agile delivery, alongside Docker/Jenkins delivery and code reviews.

## TECHNICAL SKILLS

**Agentic AI & LLM:** LangGraph (agent orchestration), RAG, tool calling, MCP, agent memory, guardrails, evaluation, Rasa
**Cloud & Delivery:** Google Cloud (VM deployment), AWS EC2, Cloudflare Tunnel (HTTPS), Docker, Jenkins, CI/CD, Linux, Git, Gitea, Github
**Languages & APIs:** Python, Java, JavaScript, FastAPI, Spring Boot, REST APIs, microservices, secure service integration (token-based auth)
**ML / Data:** Computer vision (Detectron2, Siamese networks), NLP, Random Forest, XGBoost, Decision Tree, Logistic Regression, TensorFlow
**Web & Databases:** React, MySQL, MongoDB, Google Drive integration, responsive UI, data mapping / ETL workflows
**Client-Facing:** client demos, stakeholder feedback, code reviews, Agile

## AI AGENT & ML PROJECTS

**Naukri AI Recruitment / Support Agent** | LangGraph, RAG, MCP, tool calling, FastAPI, Python, Google Cloud
Built and deployed a live LangGraph agent with status-retrieval and RAG tools, searching **12 policy documents**; added memory, guardrails, required-field checks and fallback/error handling. Created 10-query test sets to evaluate intent and status-flow behavior. Deployed FastAPI on a Google Cloud VM and exposed HTTPS through a Cloudflare Tunnel routed via an AWS EC2 connector. Live demo | GitHub

**PhishGuard — Phishing URL Detection** | Python, FastAPI, ML, React
Built a full-stack phishing URL classifier with a FastAPI inference API and React interface; compared Random Forest, Logistic Regression and XGBoost. GitHub | Live demo | IEEE paper

## PROFESSIONAL EXPERIENCE

**Software Development Engineer | PayVance Innovation Pvt. Ltd., Thane (Dec 2024 – Dec 2025)**

- Built an AI chatbot using **Rasa with 4 intent categories** for employee account lookup, customer-document retrieval, loan/date calculations and policy questions; integrated gateway/auth/discovery/loan services and enforced secure, access-aware responses using caller tokens and the internal auth service.
- Independently built **SignSure**, a FastAPI-served computer-vision signature-verification pipeline combining fine-tuned Detectron2 document-image detection, image preprocessing and a Siamese comparison model. Reported detection metrics: **85% accuracy, 83% precision, 78% recall**; clean-image comparison accuracy was **92%**, with ~70% end-to-end results on noisy inputs.
- Fine-tuned the detector using ~**200 client documents** and evaluated with 90 additional documents (50 separate bank documents and 40 office-captured samples). Received a **"Pat on the Back" appreciation certificate**; the detection component was reused in other projects.
- Worked directly with founders and clients: demonstrated work and translated monthly client feedback into Agile changes; collaborated with backend, full-stack and frontend engineers and reviewed peer code and an intern's Docker/Jenkins changes.
- Co-managed Docker/Jenkins delivery across **13 ongoing and several completed company projects**; replaced manual Windows JAR copying with Linux containerized, multi-environment pipelines for dev, test, demo and selected production deployments, typically deployable in minutes.
- Built the React UI for a visual ETL tool that let nontechnical banking users map columns and configure joins; supported recurring transfers of **~800K–1M rows**, with job setup in up to 10 minutes and execution taking ~20–30 minutes on a 32 GB server.

**Freelance Web Developer | Independent client projects (2025 – Present)**

- Delivered **3 live, responsive portfolio websites** end to end, including deployment on Vercel; built Google Drive-backed content updates and integrated Google location/reviews, service information and WhatsApp contact workflows where required.

## EDUCATION

**B.Tech, Information Technology -** Ramrao Adik Institute of Technology, DY Patil University | 2021–2025 | **GPA: 8.44/10** · **Degree certificate**

## PUBLICATION & RECOGNITION

**Publication:** "Phishing URL Detection using Machine Learning Algorithms", IEEE Xplore, Oct 2025.
**Pat on the Back -** PayVance Innovation: Recognized for successful delivery of the SignSure **module** · **Certificate**
**IIT Roorkee Campus Immersion (2026): Certificate**
**Excellence in Evaluations -** Agentic Systems and Design, iHUB DivyaSampark / Masai**: Jun 2026** · **Jul 2026** · **Aug 2026** · **Oct 2026**
